Subject: Suggestions

I felt last nights session in Burnie was very informative.

I have one area that I feel would produce almost immediate results with little outlay of funds.

Clinicians washing their hands before they enter a patients room. Either with soap and water or the alcohol based antiseptics.

Educated the patients that this is their right to have the person tending has not brought "bugs" from some one else.

The cost reduction in hospital acquired infections would be tremendous.
(Estimated 10 to 15 %) by some studies done.
Shorter stays, less repeats etc.

Pls feel free to contact me if you need any further information on this.
